(Injector Coding Application)
User's Manual

Injector Coding Application

This application allows the operator to code a single injector or all injectors on the vehicle.

Injector Coding Process

On starting the application the menu will display each injector for the vehicle plus an option to code all injectors. The current injector code read from the vehicle can be seen at the bottom of the screen by highlighting an injector.

To enter a new code select the appropriate item on the menu. The **'up'**, **'down'** and **'OK'** keys can then be used to enter the 10 digit code. Once entered confirm the code is correct by pressing **'OK'** or press **'X'** to correct any errors. The code will then be coded to the vehicle. If **'All injectors'** was selected then the application will ask for each of the injector codes to be entered in turn.

Once the application has successfully completed and all instructions followed correctly a message **"PROCEDURE COMPLETE"** will be displayed. Press the **'OK'** button to return to the main application menu.

Note: If the process fails for whatever reason, a failure message will be displayed. At this time the process should be repeated ensuring that all conditions for the process have been met.

Injector Coding Model Year Updates

The software associated with the Injector Coding application is updated periodically to increase its coverage for new JLR vehicles and model year updates. You can check for these updates by connecting your device to a PC via the supplied USB cable, and launching the DA App Hub. This tool will connect to the Diagnostic Associates file server and check to see if a newer version of the application is available to download.

Injector Coding Supported JLR Vehicles

The following JLR vehicles and associated model years are supported by the Injector Coding application at the time this user manual was produced. To obtain an up-to-date version of this table you should visit the Diagnostic Associates website.
